

No-till transplanter unit

No-till coulters on RJ planter

No-till double disk opener on RJ planter

I've customized an RJ Equipment carousel transplanter for no-till transplanting of tomatoes into killed cover crops. This transplanter has a spring-loaded 20-inch, turbo coulters, followed by a double disk opener and a short shoe to place the transplant in. Angled press wheels tuck the soil firmly around the plant. The package leaves virtually no soil showing after the crop is planted, giving good full coverage mulch for the whole season.

RJ Equipment is now manufacturing no-till transplanters on custom order basis. Phone:
